

Performance. Fit. Delivery.

Meramec Power Gen Current Transformers

◀ Encapsulated Generator CT

Features a durable exterior finish which makes it ideal for operating under harsh conditions where contaminants are present. This design can be used in Isolated Phase Bus (IPB) enclosures on higher system voltage levels.

▶ Board Mounted Generator CT

Designed to be mounted over the high voltage terminal bushing. May also be used on Isolated Phase Bus (IPB). Easily designed to suit any custom mounting footprint and offers a lightweight alternative to bulkier cast units. A major benefit is a quick turnaround during a forced emergency outage.

What makes Meramec the right choice is our innovation, quality and delivery.

Every CT we produce is custom designed to your specific application. Our engineering design, our technicians' attention to detail, and our 100% verification all contribute to the achievement of our 5 year 99.97% quality performance rating.

Our customer service is paramount as well. If you are in a scheduled maintenance mode, we deliver when you need it. If you are in a downtime crisis situation, we "pull out all the stops" to get you "up and running."

When you are in need of Current Transformers to directly replace existing units, to upgrade your system, or to outfit new equipment— Spec Meramec. . . When it has to be Right!
