

UPGRADE WITH CONFIDENCE

Upgrading your older substations to meet today's power quality and uptime performance demands is a challenge. To achieve these higher performance levels you frequently need to add CTs. Typically tank-top obstructions and the lack of space present problems.

The Meramec Outdoor Mounted Slip-Over Bushing Current Transformer (SBCT) with a custom mounting design is the solution. Our CT is self-contained and designed to be mounted on power transformers. This design also works well for power circuit breakers and cable terminators (potheads).

- The SBCT coil is fully encapsulated in an U. V. stabilized compound resin system that has been developed for harsh outdoor conditions.
- The Meramec SBCT is custom designed to fit over any bushing and can be supported by available aluminum or stainless steel mounting clamps.

Meramec's **Rapid Response** is available for your crisis situations. We are available to answer phone calls 24/7. All our products are custom-designed, guaranteed, and made in the U.S.A.

When it has to be right— *Spec the Best!*
