

## Meramec passes ISO 9001:2008 Recertification Audit

### **Cuba, Missouri (June 2013)**

On Dec 7th, 2012 Meramec's Quality Management System was recertified to ISO 9001:2008. The Recertification\* audit was conducted between Dec 4th and Dec 7th by our third party registrar, NSF-ISR. The audit highlighted Meramec's commitment to customer satisfaction and continual improvement and growth in all areas, including new products. Applying the principles behind the ISO 9001:2008 standard in Meramec's Quality Management System has helped us ensure consistency in our processes and products, and has helped us manage the implementation of process and product improvements.

\*Recertification audits are conducted every 3 years, and all aspects of the Quality Management System (QMS) are audited. Surveillance audits, on the other hand, are conducted annually until the next Recertification audit. These audits cover only certain aspects of the QMS.

### **About Meramec**

Meramec Electrical Products is the preeminent manufacturer of bushing current transformers for the high-voltage circuit breaker, large power transformer, generator, and utility markets. For decades, Meramec Electrical Products has been regarded as the highest quality Current Transformer producer in the electric power distribution industry.
