

SPEC THE BEST

Doing it right means never leaving quality up to chance. In today's business environment, short-term cost savings can trump the long-term total cost benefits associated with higher quality. This leaves one system-critical area you can no longer leave to chance - the selection of your CTs.

When specifying your next circuit breaker and power transformer, Spec Meramec - and build in the confidence you need to ensure dependability. All Meramec CT's are custom designed to your exact specifications, using only the highest quality components that are completely manufactured and assembled in the USA. The Meramec name is recognized for **proven** performance (a 99.98% quality performance rating) in product quality, technical service and 24/7 customer support.

Substation and Apparatus Engineers, when planning your Current Transformer requirements for new equipment, system upgrades and replacement units, remember, there is no equivalent - only SPEC MERAMEC.
